

## Plastics Welding/Fabrication Services

Unit Engineers & Constructors Ltd have recently added plastic pipework fabrication and welding capabilities to their range of services, which will complement their already extensive experience and history within the field of industrial pipework fabrication and installation.

The requirement for plastic pipework systems fabricated from materials such as: Polypropylene, Polyethylene and PVDF, is widespread within the chemical and water related industries. Therefore, the addition of the plastic fabrication and welding capabilities will enable the company to offer their services to a wider market.

The service offering will include full project management of plastic pipework fabrication including installation onto prefabricated skid units or within an existing plant facilities. As this new service is complimentary to their existing capabilities, the fabrication and installation of plastic fabrications alongside steel pipework fabrications, means the company can now offer a 'one stop shop approach' for pipework projects that include a multitude of material types.

Should you wish to learn more about Unit Engineers & Constructor's range of services, or have an upcoming project for enquiry, please get in touch with the Immingham office for a free no obligation site survey and quotation.
